

OxyGuard Remote Indicator

Remote indicator for OxyGuard Multi-channel Systems

The OxyGuard Remote Indicator is a display and alarm unit with one display, a selector switch and an alarm buzzer. It is designed for use with an OxyGuard Multichannel unit. It is powered by 24 VDC, and can therefore receive its power from a multichannel unit. The unit uses the analogue outputs of the multichannel unit, and is factory-adjusted to suit the measuring range of the multichannel unit it will be used with.

Housed in a watertight (IP65) plastic enclosure, the Remote Indicator measures 120 x 160 x 93 mm. The alarm buzzer projects approximately 8 mm from the top. The unit is fixed using four screws.

Order number A01XRIND.

When ordering please state the desired display ranges for the channels to be used.

If the Remote Indicator is to be used with existing equipment please state the serial number of the multichannel unit concerned.
